

Every household on the map, every list mail-ready

We'll turn every weekly ServSuite export into a **mail-ready list with no cleanup**, fix each problem once, and put **every Massey household on the map**, so you know who, when, and where to mail.

HOW IT WORKS

Beyond the list: find your next customers

Neighbors become customers

See which streets already trust Massey and reach the homes missing a service their neighbors have.

Mosquito offers timed to the rain

Machine learning reads rain, forecasts and nearby waterbodies to predict where demand jumps next.

Know what each customer needs

Every home's services, spend and neighbors in one view, with a **machine learning** score for the next best offer.

We've done this before

- 100,000+ assets from many messy datasets mapped to parcels for Orange County, FL, now behind the county's infrastructure funding plan.
- For federal and private clients, cybersecurity practices are integrated into projects, supporting work with sensitive and controlled information.
- Dashboards and maps local governments use to set their priorities, make operational decisions, and communicate to stakeholders.

Our Capabilities

- Quality control and independent technical review analyses built to withstand regulatory scrutiny.
- Geospatial analysis and decision support: GIS, computer vision, interactive dashboards and digital maps that turn data into clear decisions.
- Data integration and governance for legacy and multi-source data.
